INTERNATIONAL PRELIMINARY EXAMINATION REPORT

International application No.

PCT/GB 03/04895

١.	Bas	sis	of	the	re	pc	rt

1. With regard to the **elements** of the international application (Replacement sheets which have been furnished to the receiving Office in response to an invitation under Article 14 are referred to in this report as "originally filed" and are not annexed to this report since they do not contain amendments (Rules 70.16 and 70.17)):

	Description, Pages							
	1-10		as originally filed					
	Cla	ims, Numbers						
	1-4	·	as originally filed					
	• •		as originally mou					
	Dra	wings, Sheets						
	1/3-	3/3	as originally filed					
2.	With lang	n regard to the langu Juage in which the int	age, all the elements marked above were available or furnished to this Authority in the ernational application was filed, unless otherwise indicated under this item.					
	The	se elements were av	ailable or furnished to this Authority in the following language: , which is:					
		the language of a tra	inslation furnished for the purposes of the international search (under Rule 23.1(b)).					
		the language of publ	ication of the international application (under Rule 48.3(b)).					
the language of a translation furnished for the purposes of international preliminary examination (un Rule 55.2 and/or 55.3).								
3.	. With regard to any nucleotide and/or amino acid sequence disclosed in the international application, the international preliminary examination was carried out on the basis of the sequence listing:							
		contained in the inte	rnational application in written form.					
		filed together with the	e international application in computer readable form.					
		furnished subsequer	ntly to this Authority in written form.					
	☐ furnished subsequently to this Authority in computer readable form.							
	☐ The statement that the subsequently furnished written sequence listing does not go beyond the disclosur in the international application as filed has been furnished.							
	☐ The statement that the information recorded in computer readable form is identical to the written sequentisting has been furnished.							
4.	The amendments have resulted in the cancellation of:							
		the description,	pages:					
		the claims,	Nos.:					
		the drawings,	sheets:					

.

EXAMINATION REPORT - SEPARATE SHEET

Re Item III: Non-establishment of opinion with regard to novelty, inventive step and industrial applicability

No examination of the claimed invention as to novelty, inventive step and industrial applicability is carried out for claim 4 because claim 4 relies on references to the drawings (see Rule 6.2(a) PCT and the PCT Preliminary Examination Guidelines, PCT/GL/IV, Chapter II, 4.10).

Re Item V: Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement.

1. Technical Field:

Method of calibrating bias drift with temperature over an operating temperature of a vibrating structure gyroscope.

2. State of the Art:

The following documents have been considered for the purposes of this report:

D1: S. K. Hong: "Compensation of nonlinear thermal bias drift of Resonant Rate Sensor using fuzzy logic"; Sensors and Actuators A, Elsevier Sequoia S.A.; vol. 78, no. 2-3; 14 December 1999

D2: GB-A-2 327 265; British Aerospace PLC; 20 January 1999

Document D1, which is considered as being the closest prior art to the subject-matter of independent claim 1, describes the compensation of nonlinear thermal bias drift of resonant rate sensors by using fuzzy logic. Document D2 discloses a method for reducing bias error in a vibrating structure gyroscope.

3. Independent Claims: Claim 1 (apparatus).

Novelty and Inventive Step - Articles 33(2) and (3) PCT 4.

4.1 Independent claim 1:

The subject-matter of independent claim 1 differs from document D1 in that a response mode signal is separated into a real component induced by applied rotation

EXAMINATION REPORT - SEPARATE SHEET

and a quadrature component which is an error term. Primary drive means voltage which corresponds to a change in quality factor, vibrating structure frequency, secondary drive quadrature component values which correspond to real component bias errors and secondary drive real component values which correspond to a change in bias are measured to calculate a set of bias calibration coefficients.

By using this calculated set of bias calibration coefficients, the objective technical problem is solved to improve the performance of the bias drift over temperature. Such a calculation is not known nor rendered obvious by the cited prior art. Hence, the subject-matter of present claim 1 is considered as being novel and inventive. The requirements of Article 33(2) and (3) PCT are fulfilled.

4.2 Dependent Claims 2 and 3:

The dependent claims 2 and 3 relate to preferred embodiments of the apparatus according to independent claim 1. Therefore, the requirements of Article 33(2) and (3) PCT are also fulfilled.

5. Industrial Applicability - Article 33(4) PCT

The invention as claimed in claims 1 to 3 is industrially applicable in the field of calibrating bias drift with temperature of vibrating structure gyroscopes.

Certain defects in the international application 6.

The features of the claims are not provided with reference signs placed in parentheses (Rule 6.2(b) PCT).

Contrary to the requirements of Rule 5.1(a)(ii) PCT, the relevant background art disclosed in document D1 is not mentioned in the description, nor is this document identified therein.
